技术规格

Background:	One of two major clathrin-associated adaptor complexes, AP-2, is a heterotetramer which is associated with the plasma membrane. This complex is composed of two large chains, a medium chain, and a small chain. This gene encodes the small chain of this complex. Alternative splicing has been observed in this gene and results in two known transcripts.
Applications:	ELISA, WB
Name of antibody:	AP2S1
Immunogen:	Fusion protein of human AP2S1
