技术规格

Background:	Apolipoprotein B48 receptor is a macrophage receptor that binds to the apolipoprotein B48 of dietary triglyceride (TG)-rich lipoproteins. This receptor may provide essential lipids, lipid-soluble vitamins and other nutrients to reticuloendothelial cells. If overwhelmed with elevated plasma triglyceride, the apolipoprotein B48 receptor may contribute to foam cell formation, endothelial dysfunction, and atherothrombogenesis.
Applications:	ELISA, IHC
Name of antibody:	APOBR

Immunogen:	Synthetic peptide of human APOBR
Full name:	apolipoprotein B receptor
