技术规格

Background:	Arylsulfatase B encoded by this gene belongs to the sulf atase family. The arylsulfatase B homodimer hydrolyzes s ulfate groups of N-Acetyl-D-galactosamine, chondriotin s ulfate, and dermatan sulfate. The protein is targetted to the lysozyme. Mucopolysaccharidosis type VI is an autos omal recessive lysosomal storage disorder resulting from a deficiency of arylsulfatase B. Two alternatively spliced t ranscript variants encoding distinct isoforms have been f ound for this gene.
