技术规格

Background:	The protein encoded by this gene is a type II transmembrane protein that is similar to two families of cell adhesion molecules, the protocadherins and ependymins. This protein may play a role in calcium-dependent cell adhesion. This protein is glycosylated, and the orthologous mouse protein is localized to the lysosome. Alternative splicing results in multiple transcript variants. A related pseudogene has been identified on chromosome 8.
Applications:	ELISA, WB, IHC
Name of antibody:	EPDR1

Immunogen:	Fusion protein of human EPDR1
Full name:	ependymin related 1
