**Target Background** 

Swissprot

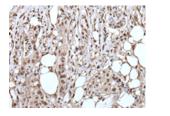

Implicated in a number of cellular processes, including proliferation, differentiation, caspase-dependent and caspaseindependent apoptosis, suppression of transformation (tumor suppressor), inhibition of protein phosphatase 2A, regulation of mRNA trafficking and stability in association with ELAVL1, and inhibition of acetyltransferases as part of the INHAT (inhibitor of histone acetyltransferases) complex. Plays a role in E4F1-mediated transcriptional repression.
