技术规格

Background:	Metalloprotease that mediates deubiquitination of target proteins. Catalyzes the deubiquitination of polyubiquitin side chains generated by post-translational polyubiquitination in proteins such as tubulins. Also removes gene-encoded polyubiquitins from the carboxy-terminus of target proteins such as MYLK. Acts as a long-chain deubiquitinase and specifically shortens long polyubiquitin chains, while it is not able to remove the branching point ubiquitin, a process catalyzed by AGLB5/CCP5. By similarity.
Applications:	WB

Name of antibody:	AGBL4
Immunogen:	Synthesized peptide derived from internal of human C BCP6.
