### 技术规格

<b>Background:</b>	This gene encodes a member of the serine/threonine protein kinase family. The encoded protein, a component of a cytokine-activated protein complex that is an inhibitor of the essential transcription factor NF-kappa-B complex, phosphorylates sites that trigger the degradation of the inhibitor or via the ubiquitination pathway, thereby activating the transcription factor.
<b>Applications:</b>	WB
<b>Name of antibody:</b>	CHUK(Phospho-Ser176/177)
<b>Immunogen:</b>	Peptide sequence around phosphorylation site of serine 176/177 (Q-G-S(p)-L-C) derived from Human IKK-alpha/beta.

<b>Full name:</b>	conserved helix-loop-helix ubiquitous kinase
<b>Synonyms :</b>	IKK1; IKKA; IKBKA; TCF16; NFKB1KA; IKK-alpha
<b>SwissProt:</b>	O15111
