Background:	Cytoplasmic polyadenylation element binding protein 4 (CPEB4) is a s equence-specific RNA-binding protein that participates in translational control. CPEB4 is a member of the CPEB family, which includes CPEB 1, CPEB2, CPEB3, and CPEB4, all of which share structure and sequen ce identity in the C-terminal RNA-binding domain (RBD). CPEB4 has t wo domains: one that is structured for RNA binding and one that is unstructured and low complexity that has no known function.
