技术规格

Background:	The protein encoded by this gene belongs to the family of P-type cation transport ATPases, and to the subfamily of Na ⁺ /K ⁺ -ATPases. Na ⁺ /K ⁺ -ATPase is an integral membrane protein responsible for establishing and maintaining the electrochemical gradients of Na and K ions across the plasma membrane. These gradients are essential for osmoregulation, for sodium-coupled transport of a variety of organic and inorganic molecules, and for electrical excitability of nerve and muscle.
Applications:	WB
Name of antibody:	ATP1A1(Phospho-Ser16)
Immunogen:	Peptide sequence around phosphorylation site of serine 16 (A-V-S(p)-E-Q) derived from Human ATPase.

Full name:	ATPase, Na ⁺ /K ⁺ transporting, alpha 1 polypeptide
Synonyms :	0
SwissProt:	P05023
WB Predicted band size:	113 kDa
WB Positive control:	293 cells lysates treated with PMA
WB Recommended dilution:	500-1000
