

DPM1 抗原（重组蛋白）

中文名称：DPM1 抗原（重组蛋白）

英文名称：DPM1 Antigen (Recombinant Protein)

别名：MPDS; CDGIE

储存：冷冻（-20℃）

相关类别：抗原

概述

Full length fusion protein

技术规格

Full name:	dolichyl-phosphate mannosyltransferase polypeptide 1, catalytic subunit
Synonyms:	MPDS; CDGIE
Swissprot:	O60762
Gene Accession:	BC008466
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	Dolichol-phosphate mannose (Dol-P-Man) serves as a donor of mannose residues on the luminal side of the endoplasmic reticulum (ER). Lack of Dol-P-Man results in defective surface expression of GPI-anchored proteins. Dol-P-Man is synthesized from GDP-mannose and dolichol-phosphate on the cytosolic side of the ER by the enzyme dolichol-phosphate mannosyltransferase. Human DPM1 lacks a carboxy-termina

I transmembrane domain and signal sequence and is regulated by DP M2. Mutations in this gene are associated with congenital disorder of glycosylation type Ie. Alternative splicing results in multiple transcript variants.
