Full name:	ketohexokinase (fructokinase)
Swissprot:	P50053
Gene Accession:	BC006233
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE

Background:	This gene encodes ketohexokinase that catalyzes conversion of fructose to fructose-1-phosphate. The product of this gene is the first enzyme with a specialized pathway that catabolizes dietary fructose. Alternatively spliced transcript variants encoding different isoforms have been identified.
