技术规格

Background:	This gene encodes a stromal cell-derived alpha chemokine member of the intercrine family. This gene product and its receptor CXCR4 can activate lymphocytes and have been implicated in the metastasis of some cancers such as breast cancer. Mutations in this gene are associated with resistance to human immunodeficiency virus type 1 infections. Multiple transcript variants encoding different isoforms have been found for this gene.
Applications:	ELISA, IHC
Name of antibody:	CXCL12
Immunogen:	Synthetic peptide of human CXCL12

Full name:	chemokine (C-X-C motif) ligand 12
Synonyms :	IRH; PBSF; SDF1; TLSF; SDF1A; SDF1B; TPAR1; SCYB12
SwissProt:	P48061
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human breast cancer and Human cervical cancer
