技术规格

Background:	Cytochrome b is comprised of a light chain (alpha) and a heavy chain (beta). This gene encodes the light, alpha subunit which has been proposed as a primary component of the microbicidal oxidase system of phagocytes. Mutations in this gene are associated with autosomal recessive chronic granulomatous disease (CGD), that is characterized by the failure of activated phagocytes to generate superoxide, which is important for the microbicidal activity of these cells.
Applications:	ELISA, IHC
Name of antibody:	CYBA

Immunogen:	Synthetic peptide of human CYBA
Full name:	cytochrome b-245, alpha polypeptide
Synonyms :	p22-PHOX
SwissProt:	P13498
ELISA Recommended dilution:	2000-10000
IHC positive control:	Human tonsil and Human cervical cancer
IHC Recommend dilution:	50-200
