技术规格

Background:	This gene encodes a protein that is capable of inducing formation of cartilage in vivo. Although other bone morphogenetic proteins are members of the TGF-beta superfamily, this gene encodes a protein that is not closely related to other known growth factors. This gene is expressed as alternatively spliced variants that share an N-terminal protease domain but differ in their C-terminal region.
Applications:	ELISA, IHC
Name of antibody:	BMP1
Immunogen:	Synthetic peptide of human BMP1
