技术规格

Background:	This gene encodes the peptide hormones calcitonin, calcitonin gene-related peptide and katacalcin by tissue-specific alternative RNA splicing of the gene transcripts and cleavage of inactive precursor proteins. Calcitonin is involved in calcium regulation and acts to regulate phosphorus metabolism. Calcitonin gene-related peptide functions as a vasodilator while katacalcin is a calcium-lowering peptide. Multiple transcript variants encoding different isoforms have been found for this gene.
Applications:	ELISA, IHC
Name of antibody:	CALCA

Immunogen:	Synthetic peptide of human CALCA
Full name:	calcitonin-related polypeptide alpha

SwissProt:	P01258
ELISA Recommended dilution:	1000-5000
IHC positive control:	Human liver cancer and Human thyroid cancer
