技术规格

Background:	The protein encoded by this gene contains three cysteine-rich domains, a proline-rich region, and a pleckstrin homology domain with an overlapping Ras-associating domain. It is localized in the speckle domains of the nucleus, and mediates the regeneration of phosphatidylinositol (PI) from diacylglycerol in the PI-cycle during cell signal transduction.
Applications:	WB
Name of antibody:	DGKQ
Immunogen:	Synthesized peptide derived from internal of human DGKQ.

Full name:	diacylglycerol kinase, theta 110kDa
Synonyms :	DAGK; DAGK4; DAGK7
SwissProt:	P52824
WB Predicted band size:	101 kDa
WB Positive control:	HT-29 cells lysate
WB Recommended dilution:	500-3000
