技术规格

Background:	The protein encoded by this gene belongs to light intermediate subunit family, whose members are components of the multiprotein cytoplasmic dynein complex, which is involved in intracellular trafficking and chromosome segregation during mitosis. The protein plays a role in moving the spindle assembly checkpoint (SAC) from kinetochores to spindle poles. The protein may also mediate binding to other cargo molecules to facilitate intracellular vesicle trafficking.
Applications:	ELISA, IHC
Name of antibody:	DYNC1LI1

Immunogen:	Fusion protein corresponding to a region derived from 324-523 amino acids of human DYNC1LI1
Full name:	dynein cytoplasmic 1 light intermediate chain 1
Synonyms:	LIC1; DLC-A; DNCL1
SwissProt:	Q9Y6G9
ELISA Recommended dilution:	5000-10000
IHC Positive control:	Human liver cancer; Human brain
IHC Recommended dilution:	25-100
