技术规格

Background:	This intronless gene encodes a transcription factor that contains a basic leucine zipper (bZIP) domain and recognizes the CCAAT motif in the promoters of target genes. The encoded protein functions in homodimers and also heterodimers with CCAAT/enhancer-binding proteins beta and gamma. Activity of this protein can modulate the expression of genes involved in cell cycle regulation as well as in body weight homeostasis.
Applications:	WB, IHC
Name of antibody:	CEBPA(Phospho-Ser21)
Immunogen:	Peptide sequence around phosphorylation site of Serine 2

	1 (L-Q-S(p)-P-P) derived from Human C/EBP- α .
