<b>Background:</b>	This gene encodes a caspase recruitment domain-containing protein that is a member of the membrane-associated guanylate kinase (MAGUK) family of proteins. Members of this protein family are scaffold proteins that are involved in a diverse array of cellular processes including cellular adhesion, signal transduction and cell polarity control. This protein has been shown to specifically interact with BCL10, a protein

known to function as a positive regulator of cell apoptosis and NF- $\kappa$ B activation. Alternate splicing results in multiple transcript variants.
