Background:	The protein encoded by this gene belongs to a family of ankyrin r epeat proteins that, along with four other protein families, contain a C-terminal SOCS box motif. Growing evidence suggests that the SOCS box, similar to the F-box, acts as a bridge between specific s ubstrate-binding domains and the more generic proteins that comp rise a large family of E3 ubiquitin protein ligases. Alternatively splic ed transcript variants have been identified for this gene.
