技术规格

Background:	This gene encodes a receptor that binds the Fc region of monomeric immunoglobulin G. The encoded protein transfers immunoglobulin G antibodies from mother to fetus across the placenta. This protein also binds immunoglobulin G to protect the antibody from degradation. Alternative splicing results in multiple transcript variants.
Applications:	ELISA, WB, IHC
Name of antibody:	FCGRT
Immunogen:	Synthetic peptide of human FCGRT
Full name:	Fc fragment of IgG receptor and transporter
Synonyms:	FCRN; alpha-chain

SwissProt:	P55899
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human liver cancer and Human thyroid cancer
IHC Recommend dilution:	30-150
WB Predicted band size:	40 kDa
WB Positive control:	Human placenta tissue lysate
WB Recommended dilution:	500-2000
