技术规格

Background:	This gene encodes a phosphorylated protein that is a member of a Skp1-Cullin-F-box-like complex. The protein is essential for normal development of the vasculature and mutations in this gene have been associated with glomuvenous malformations, also called glomangiomas. Alternatively spliced variants that encode different protein isoforms have been described but the full-length nature of only one has been determined.
Applications:	ELISA, IHC
Name of antibody:	GLMN

Immunogen:	Synthetic peptide of human GLMN
Full name:	glomulin, FKBP associated protein
Synonyms :	FAP; GVM; GLML; FAP48; FAP68; FKBPAP; VMGLOM
SwissProt:	Q92990
ELISA Recommended dilution:	1000-2000
IHC positive control:	Human thyroid cancer and Human brain
IHC Recommend dilution:	25-100
