技术规格

Background:	The centromere is a specialized chromatin domain, present throughout the cell cycle, that acts as a platform on which the transient assembly of the kinetochore occurs during mitosis. All active centromeres are characterized by the presence of long arrays of nucleosomes in which CENPA replaces histone H3. CENPT is an additional factor required for centromere assembly.
Applications:	ELISA, WB
Name of antibody:	CENPT
Immunogen:	Synthetic peptide of human CENPT

Full name:	centromere protein T
