技术规格

Background:	This gene encodes a hypothalamic neuropeptide precursor protein that gives rise to two mature neuropeptides, orexin A and orexin B, by proteolytic processing. Orexin A and orexin B, which bind to orphan G-protein coupled receptors HCRTR1 and HCRTR2, function in the regulation of sleep and arousal. This neuropeptide arrangement may also play a role in feeding behavior, metabolism, and homeostasis.
Applications:	ELISA, IHC
Name of antibody:	HCRT(Orexin-B)
Immunogen:	Synthetic peptide of human HCRT(Orexin-B)
Full name:	hypocretin neuropeptide precursor
