## 技术规格

	The protein encoded by this gene is a major non-neuro nal microtubule-associated protein. This protein contains
	a domain similar to the microtubule-binding domains of
	neuronal microtubule-associated protein (MAP2) and mic
	rotubule-associated protein tau (MAPT/TAU). This protein
	promotes microtubule assembly, and has been shown to
Background:	counteract destabilization of interphase microtubule catas
	trophe promotion. Cyclin B was found to interact with t
	his protein, which targets cell division cycle 2 (CDC2) kin
	ase to microtubules. The phosphorylation of this protein
	affects microtubule properties and cell cycle progression.
	Multiple transcript variants encoding different isoforms h
	ave been found for this gene.
