技术规格

Background:	Component of the Mediator complex, a coactivator involved in the regulated transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene-specific regulatory proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to promoters by direct interactions with regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation complex with RNA polymerase II and the general transcription factors.

Name of antibody:	MED16

Immunogen:	Fusion protein of human MED16
Full name:	mediator complex subunit 16
Synonyms :	DRIP92; THRAP5; TRAP95
SwissProt:	Q9Y2X0
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human liver cancer and human thyroid cancer
