| Background: | Mammalian mitochondrial ribosomal proteins are encoded by nuclear genes and help in protein synthesis within the mitochondrion. Mitochondrial ribosomes (mitoribosomes) consist of a small 28S subunit and a large 39S subunit. They have an estimated 75% protein to rRNA composition compared to prokaryotic ribosomes, where this ratio is reversed. |
| Applications: | WB, IHC, IF |
| Name of antibody: | MRPS21 |
| Immunogen: | Synthesized peptide derived from internal of human MRPS21. |
| Full name: | mitochondrial ribosomal protein S21 |
