技术规格

Background:	This gene encodes a member of the muscle segment homeobox gene family. The encoded protein is a transcriptional repressor whose normal activity may establish a balance between survival and apoptosis of neural crest-derived cells required for proper craniofacial morphogenesis. The encoded protein may also have a role in promoting cell growth under certain conditions and may be an important target for the RAS signaling pathways.
Applications:	WB
Name of antibody:	MSX2
Immunogen:	Synthesized peptide derived from Internal of human MSX2.
