技术规格

Background:	Heat-shock transcription factors (HSFs) activate heat-shock response genes under conditions of heat or other stresses. HSF4 lacks the carboxyl-terminal hydrophobic repeat which is shared among all vertebrate HSFs and has been suggested to be involved in the negative regulation of DNA binding activity. Two alternatively spliced transcripts encoding distinct isoforms and possessing different transcriptional activity have been described.
Applications:	ELISA, IHC
Name of antibody:	HSF4
Immunogen:	Synthetic peptide of human HSF4
Full name:	heat shock transcription factor 4

Synonyms:	CTM; CTRCT5
SwissProt:	Q9ULV5
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human cervical cancer
IHC Recommend dilution:	40-200
