技术规格

Background:	G-protein coupled receptor for 5-hydroxytryptamine (serotonin). Also functions as a receptor for various alkaloids and psychoactive substances. Ligand binding causes a conformation change that triggers signaling via guanine nucleotide-binding proteins (G proteins) and modulates the activity of down-stream effectors, such as adenylate cyclase. Signaling inhibits adenylate cyclase activity.
Applications:	WB
Name of antibody:	HTR1F
Immunogen:	Synthesized peptide derived from internal of human 5-HT-1F.
Full name:	5-hydroxytryptamine (serotonin) receptor 1F, G protein-coupled

Synonyms :	5HT6; MR77; 5-HT1F; HTR1EL; 5-HT-1F
SwissProt:	P30939
WB Predicted band size:	42 kDa
WB Positive control:	COS-7 cells lysate
WB Recommended dilution:	500-3000
