### 技术规格

<b>Background:</b>	Required for DNA double-strand breaks (DSBs) formation in unsynapsed regions during meiotic recombination. Probably acts by forming a complex with MEI4 and REC114, which activates DSBs formation in unsynapsed regions, an essential step to ensure completion of synapsis. Not required for HORMAD1 functions in pairing-independent synaptonemal complex formation, ATR recruitment to unsynapsed axes, meiotic silencing of unsynapsed chromatin (MSUC) or meiotic surveillance.
<b>Applications:</b>	ELISA, IHC
<b>Name of antibody:</b>	IHO1
<b>Immunogen:</b>	Fusion protein of human IHO1
