技术规格

Background:	This gene encodes a protein with a kinase-like domain and four ankyrin-like repeats. The encoded protein associates at the cell membrane with the cytoplasmic domain of beta integrins, where it regulates integrin-mediated signal transduction. Activity of this protein is important in the epithelial to mesenchymal transition, and over-expression of this gene is implicated in tumor growth and metastasis. Alternative splicing results in multiple transcript variants.
Applications:	IHC
Name of antibody:	ILK(Phospho-Ser246)

Immunogen:	Peptide sequence around phosphorylation site of Serine 246(I-F-S(p)-H-P) derived from Human ILK.
Full name:	integrin-linked kinase
Synonyms :	P59; ILK-1; ILK-2; p59ILK; HEL-S-28
SwissProt:	Q13418
IHC positive control:	Human brain tissue
IHC Recommend dilution:	50-100
