技术规格

Background:	This gene encodes a cell surface tyrosine kinase receptor for members of the platelet-derived growth factor family. These growth factors are mitogens for cells of mesenchymal origin. The identity of the growth factor bound to a receptor monomer determines whether the functional receptor is a homodimer or a heterodimer, composed of both platelet-derived growth factor receptor alpha and beta polypeptides.
Applications:	WB
Name of antibody:	PDGFRB(Phospho-Tyr771)
Immunogen:	Peptide sequence around phosphorylation site of tyrosine

	771 (S-N-Y(p)-M-A) derived from Human PDGFRb.
Full name:	platelet-derived growth factor receptor, beta polypeptide
Synonyms :	IMF1; IBGC4; JTK12; PDGFR; CD140B; PDGFR1; PDGFR-1
SwissProt:	P09619
WB Predicted band size:	124 kDa
WB Positive control:	HepG2 cells lysates
WB Recommended dilution:	500-1000
