|--------------------------|--|
| Background: | This gene encodes a nuclear protein, which is a tyrosine kinase belonging to the Ser/Thr family of protein kinases. This protein catalyzes the inhibitory tyrosine phosphorylation of CDC2/cyclin B kinase, and appears to coordinate the transition between DNA replication and mitosis by protecting the nucleus from cytoplasmically activated CDC2 kinase. |
| Applications: | WB |
| Name of antibody: | WEE1(Phospho-Ser642) |
| Immunogen: | Peptide sequence around phosphorylation site of Serine 642(S-V-S(p)-L-T) derived from Human WEE1. |
