技术规格

Background:	This gene encodes a member of the phosphohexose mutase family. The encoded protein mediates both glycogen formation and utilization by catalyzing the interconversion of glucose-1-phosphate and glucose-6-phosphate. A non-synonymous single nucleotide polymorphism in this gene may play a role in resistance to diabetic nephropathy and neuropathy. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene.
Applications:	ELISA, WB, IHC
Name of antibody:	PGM3
Immunogen:	Fusion protein of human PGM3
Full name:	phosphoglucomutase 3
Synonyms:	AGM1; PAGM; IMD23; PGM 3

SwissProt:	O95394
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human colorectal cancer and Human liver cancer
