Full name:	potassium channel, subfamily K, member 17
Immunogen:	Fusion protein of human KCNK17
Name of antibody:	KCNK17
Applications:	ELISA, WB, IHC
Background:	The protein encoded by this gene belongs to the family of potassium channel proteins containing two pore-forming P domains. This channel is an open rectifier which primarily passes outward current under physiological K ⁺ concentrations. This gene is activated at alkaline pH. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
