技术规格

Background:	This gene encodes a resident endoplasmic reticulum (ER), N-linked glycoprotein with an N-terminal ER targeting sequence, 2 putative N-glycosylation sites, and a C-terminal ER retention signal. This protein functions as a nucleotide exchange factor for another unfolded protein response protein. Mutations in this gene have been associated with Marinesco-Sjogren syndrome. Alternate transcriptional splice variants have been characterized.
Applications:	ELISA, IHC
Name of antibody:	SIL1

Immunogen:	Fusion protein of human SIL1
Full name:	SIL1 nucleotide exchange factor
Synonyms:	BAP; MSS; ULG5
SwissProt:	Q9H173
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human colorectal cancer
IHC Recommend dilution:	100-300
