技术规格

Background:	The protein encoded by this gene functions together with DNA ligase IV and the DNA-dependent protein kinase in the repair of DNA double-strand breaks. This protein plays a role in both non-homologous end joining and the completion of V(D)J recombination. Mutations in this gene can cause short stature, microcephaly, and endocrine dysfunction (SSMED). Alternative splicing generates several transcript variants.
Applications:	ELISA, IHC
Name of antibody:	XRCC4
Immunogen:	Fusion protein of human XRCC4

Full name:	X-ray repair cross complementing 4
Synonyms:	SSMED
SwissProt:	Q13426
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human thyroid cancer and Human ovarian cancer
IHC Recommend dilution:	50-200
