### 技术规格

<b>Background:</b>	Histone demethylase that specifically demethylates 'Lys-9' of histone H3, thereby playing a central role in histone code . Does not demethylate histone H3 'Lys-4', H3 'Lys-27', H3 'Lys-36' nor H4 'Lys-20'. Demethylates both di- and trimethylated H3 'Lys-9' residue, while it has no activity on mono methylated residues. Demethylation of Lys residue generates formaldehyde and succinate.

<b>Immunogen:</b>	Synthetic peptide of human KDM4D
<b>Full name:</b>	lysine demethylase 4D
<b>Synonyms:</b>	JMJD2D
