技术规格

Background:	The protein encoded by this gene is a cyclosporine-binding protein and is mainly located within the endoplasmic reticulum. It is associated with the secretory pathway and released in biological fluids. This protein can bind to cells derived from T- and B-lymphocytes, and may regulate cyclosporine A-mediated immunosuppression. Variants have been identified in this protein that give rise to recessive forms of osteogenesis imperfecta.
Applications:	ELISA, WB, IHC
Name of antibody:	PPIB
Immunogen:	Fusion protein of human PPIB

Full name:	peptidylprolyl isomerase B (cyclophilin B)
Synonyms :	OI9; CYPB; SCYLP; CYP-S1
SwissProt:	P23284
ELISA Recommended dilution:	2000-5000
IHC positive control:	Human cervical cancer and Human liver cancer
