技术规格

Background:	This gene encodes a protein that likely functions as a transcription factor. The protein, which belongs to the ZNF75 family, includes an N-terminal SCAN domain, a KRAB box, and five C2H2-type zinc finger motifs. Another functional gene belonging to this family is located on chromosome 16, while pseudo genes have been identified on chromosomes 11 and 12. Alternative splicing results in multiple transcripts variants.
