技术规格

Background:	Protein kinase C (PKC) zeta is a member of the PKC family of serine/threonine kinases which are involved in a variety of cellular processes such as proliferation, differentiation and secretion. Unlike the classical PKC isoenzymes which are calcium-dependent, PKC zeta exhibits a kinase activity which is independent of calcium and diacylglycerol but not of phosphatidylserine.
Applications:	WB
Name of antibody:	PRKCZ(Phospho-Thr560)
Immunogen:	Peptide sequence around phosphorylation site of threonine

	ne560(Q-L-T(p)-P-D) derived from Human PKC zeta .
Full name:	protein kinase C, zeta
Synonyms :	PKC2; PKC-ZETA
SwissProt:	Q05513
WB Predicted band size:	68 kDa
WB Positive control:	COS7 cells lysates treated with PMA
WB Recommended dilution:	500-1000
