技术规格

Background:	This gene encodes an E3 ubiquitin-protein ligase that plays a role in neural-cell differentiation. Overexpression of this gene causes neurite-like elongation. The encoded protein contains both a zinc finger and a RING finger motif and is localized in the endosome/lysosome compartment, indicating that it may be involved in ubiquitin-mediated protein modification, and in synaptic vesicle membranes in neurons.
Applications:	ELISA, WB
Name of antibody:	ZNRF1
Immunogen:	Synthetic peptide of human ZNRF1

Full name:	zinc and ring finger 1, E3 ubiquitin protein ligase
