## 技术规格

**Background:** 

Stomatin-like protein 2 (STOML2), SLP-2 or EPB72-lik e 2, is a 356 amino acid member of the mec-2 famil y of proteins. Expressed ubiquitously at low levels, ST OML2 is highly expressed in heart, liver and pancreas . STOML2 is localized to the cytoplasm with some di stribution on the membrane. STOML2 was first identified as an overexpressed protein in human endometri al adenocarcinoma. Changes in cell growth in sample s with different levels of STOML2 indicate that STOM L2 could play a role in endometrial tumorigenesis. ST OML2 is also thought to play a role in regulating ion
