技术规格

Background:	Leucine-rich repeats and immunoglobulin-like domains protein 1 is a protein that in humans is encoded by the LRIG1 gene. It encodes a transmembrane protein that has been shown to interact with receptor tyrosine kinases of the EGFR-family, MET and RET. Acts as a feedback negative regulator of signaling by receptor tyrosine kinases, through a mechanism that involves enhancement of receptor ubiquitination and accelerated intracellular degradation.
Applications:	ELISA, IHC
Name of antibody:	LRIG1
Immunogen:	Synthetic peptide of human LRIG1

Full name:	leucine-rich repeats and immunoglobulin-like domains 1

SwissProt:	Q96JA1
ELISA Recommended dilution:	1000-5000
IHC positive control:	Human lung cancer
IHC Recommend dilution:	50-200
