技术规格

Background:	This gene encodes an enzyme that catalyzes the epimerization of hexose sugars such as glucose and galactose. The encoded protein is expressed in the cytoplasm and has a preference for galactose. The encoded protein may be required for normal galactose metabolism by maintaining the equilibrium of alpha and beta anomers of galactose.
Applications:	WB
Name of antibody:	GALM
Immunogen:	Fusion protein of human GALM
Full name:	galactose mutarotase

Synonyms:	GLAT; IBD1; BLOCK25; HEL-S-63p
SwissProt:	Q96C23
WB Predicted band size:	38 KD
WB Positive control:	HepG2 and U87 cell lysates
WB Recommended dilution:	500-2000
