技术规格

This gene encodes a member of the GRB2/Sem5/Drk family. This member is an adaptor-like protein involv ed in leukocyte-specific protein-tyrosine kinase signal ing. Like its related family member, GRB2-related ad aptor protein (GRAP), this protein contains an SH2 d omain flanked by two SH3 domains. This protein int eracts with other proteins, such as GRB2-associated binding protein 1 (GAB1) and the SLP-76 leukocyte protein (LCP2), through its SH3 domains. Multiple alt ernatively spliced transcript variants encoding distinct

	isoforms have been found for this gene.
