技术规格

Background:	The protein encoded by this intronless gene is an endothelial-specific type I membrane receptor that binds thrombin. This binding results in the activation of protein C, which degrades clotting factors Va and VIIIa and reduces the amount of thrombin generated. Mutations in this gene are a cause of thromboembolic disease, also known as inherited thrombophilia.
Applications:	WB
Name of antibody:	THBD

Immunogen:	Synthesized peptide derived from C-terminal of human THBD.
Full name:	thrombomodulin
Synonyms :	TM; THRM; AHUS6; BDCA3; CD141; THPH12
SwissProt:	P07204
WB Predicted band size:	60 kDa
WB Positive control:	K562 cells lysate
WB Recommended dilution:	500-3000
