技术规格

Background:	Receptor for IZUMO1 present at the cell surface of oocytes (oolemma), which is essential for species-specific gamete recognition and fertilization. The IZUMO1:IZUMO1R/JUNO interaction is a necessary adhesion event between sperm and egg that is required for fertilization but is not sufficient for cell fusion. The ligand-receptor interaction probably does not act as a membrane 'fusogen'. Does not bind folate.
Applications:	ELISA, IHC
Name of antibody:	IZUMO1R
Immunogen:	Synthetic peptide of human IZUMO1R

Full name:	IZUMO1 receptor, JUNO
Synonyms:	JUNO; FOLR4; Folbp3
SwissProt:	A6ND01
ELISA Recommended dilution :	5000-10000
IHC positive control:	Human tonsil and Human lung cancer
IHC Recommend dilution:	25-100
