技术规格

Background:	HLA-DOA belongs to the HLA class II alpha chain paralogues. HLA-DOA forms a heterodimer with HLA-DOB. The heterodimer, HLA-DO, is found in lysosomes in B cells and regulates HLA-DM-mediated peptide loading on MHC class II molecules. In comparison with classical HLA class II molecules, this gene exhibits very little sequence variation, especially at the protein level.
Applications:	WB
Name of antibody:	HLA-DOA
Immunogen:	Synthesized peptide derived from internal of human HLA-DOA.
Full name:	major histocompatibility complex, class II, DO alpha
Synonyms :	HLADZ; HLA-DNA; HLA-DZA

SwissProt:	P06340
WB Predicted band size:	28 kDa
WB Positive control:	COLO cells lysate
WB Recommended dilution:	500-3000
